

FinTrack: Smart Banking Expense Tracker

Developer: P Leela Kumar

Program: Brain O Vision Internship Project

Tech Stack: Vite, React, TypeScript, Bun, TanStack, Tailwind CSS

1. Introduction

FinTrack is a cutting-edge personal finance web application designed to replace cumbersome manual bookkeeping with an intuitive, banking-grade dashboard interface. Developed with a modern full-stack ecosystem (Vite, React, TypeScript, and Bun), the platform allows users to effortlessly track incomes, expenses, savings, and category breakdowns.

2. Project Directory Structure

As identified from the project workspace, the following structure powers the application:

File / Folder	Description / Purpose
src/	Core application source code (components, layouts, state logic)

File / Folder	Description / Purpose
<code>.tanstack/</code>	TanStack routing and state caching architecture
<code>vite.config.ts</code>	Vite bundler configuration for high-performance builds
<code>bun.lock / bunfig.toml</code>	Bun package manager configuration and lockfile
<code>tsconfig.json</code>	TypeScript compiler configuration for strict type safety

3. Key Features

- **Banking-Style Dashboard:** Real-time overview of available balance, total income, total expense, and savings.
- **Interactive Analytics:** Dynamic doughnut charts representing monthly category spending (Rent, Shopping, Groceries, Utilities, Travel) and bar charts for cash flow trends.
- **Transaction Management:** Comprehensive transaction lists with category tagging, date sorting, and status indicators.
- **Responsive User Interface:** Clean, minimalist design ensuring optimal viewing across devices.

4. Conclusion

The FinTrack project successfully demonstrates modern frontend engineering practices using Vite, TypeScript, and React. It provides an efficient and elegant solution for personal financial management, establishing a robust foundation for future cloud and AI integrations.
